Experience- 6 years

EMPLOYMENT:

Salesforce: Dec 2023 to Present

- Working as a Senior UI/UX Engineer creating visually appealing and intuitive user interfaces that enhance user experience and meet business objectives .
- Create and maintain UI component libraries and style guides to standardize UI elements and streamline development processes across multiple cloud teams serving a variety of customers.
- Collaborate closely with designers to understand requirements and provide optimized solutions.
- Ensure that UI/UX designs comply with accessibility standards (such as WCAG) to make digital products inclusive and accessible for users with disabilities.

Thoughtworks: Dec 2021 to Nov 2023

- Worked as Senior Software Engineer on development of a large scale cross-platform Web and Mobile Application using **React** and **React Native** having more than 400k users with 50k+ daily active users.
- Closely working with BAs and Leads to understand the requirements and translate them into technical journeys.
- Designed high level & low level architectures for end to end flows between host app and multiple **Micro frontends**.
- Owned multiple features and became the SME for the same.
- Successfully delivered features end to end to production and have been responsible for maintaining them.
- Lead a team of four engineers and was responsible for work planning, estimation and mentoring of the team.
- Built **BFF**(Backend for Frontend) system and designed high level & low level architectures for the same.
- Delivered features on core BE system using **Node and AWS Lambda**.
- Followed coding best practices - **Clean Code, TDD, BDD, Accessibility, SOLID principles, Design Patterns**.
- Ensured writing highly maintainable code with more than 95% unit test coverage with integration tests.

PegaSystems: Jan 2021 to Dec 2021

- Worked on developing a **Design system Library** using **React.JS, TypeScript** which can be used by the UI developers to build the React applications using the components exposed by the library.

- Worked with Javascript transpilers and bundlers like **Babel & Webpack**, also with integration tools like **Jenkins** for setting CI/CD pipeline for code repositories.
- Followed **TDD** for making the code more behavior driven and used **Jest & Enzyme** for writing tests.
- Helped the clients in adopting the product and responded to the feedback received from them.
- Worked on creating the UI studio for the platform using **React.js, Typescript, Redux, Styled components**.
- Followed all **Web Accessibility** standards from **WCAG** to make the application available for all.

TechMahindra: Apr 2018 to Dec 2020

- I was involved in designing and developing a shopping application for users where users can request the installation of the application as per their needs.
- Developed and designed user interface using **HTML 5, CSS 3** and **Javascript**.
- Worked with CSS preprocessors like **SASS** and CSS frameworks like **Bootstrap**.
- Worked on migrating the application to a single page application for creating components based architecture using **ReactJS**
- Worked with the back-end team in the process of building the RESTful API using **Node.js** and **Express.js**.

Technical Skills:

UI – React.js, Redux, React Native, HTML 5, CSS, Javascript, Typescript, SASS, Bootstrap, Angular 8.

APIs – Java, Node.js

Others – Data Structures and Algorithms, Design Patterns, System Design, TDD.

EDUCATIONAL BACKGROUND:

Durgapur, India

Dr. B. C. Roy Engineering College, Durgapur- B.Tech

Aug 2013 – Jul 2017
